DISPOSABLE DIAPER WITH PADDED WAISTBAND AND LEGHOLES

I hereby certify that this paper or fee is being
deposited with the United States Postal Service
~~as airmail~~ under 37 CFR 1.10 on the date indicated above
and is addressed to the Assistant Commissioner
for Patents, Washington, D.C. 20231.

Background of the Invention

Ins B' > Ins-DI

Field of the Invention

This is a continuation-in-part of my copending
application, S.N. ⁰⁷ 093,681, September 8, 1987, ^{v now abandoned.}

This invention relates in general to a disposable diaper
and more specifically, to a disposable diaper having a padded
waistband and legholes.

Description of the Prior Art

Disposable diapers have largely replaced the common
cloth diaper to be worn by infants and toddlers. Disposable
diapers not only can be easily discarded, but are adjustable
and convenient to attach and remove. Known diapers of the
disposable variety are typically capable of effective
retention of liquid and solid material without having to
resort to protective covers as was required by cloth diapers.

Although known disposable diaper designs are generally
satisfactory, several problems haven arisen in their use.
The waist band and border around the legholes of prior art
disposable diapers are commonly an unprotected plastic band
and the like. Such bands are uncomfortable when worn and
often such material is stiff, and scratches and abrades an
infant's skin. In addition, known waist bands and leg bands
in disposable diapers do not provide an optimum barrier
against leakage and seepage, which is so desirable.
